

Compliance is a "SNAP"

Infinity's SNAP Calibration program provides an easy & cost effective way to maintain regulatory compliance without the hassle of conventional recalibration.

The Infinity Solution.....

A monitoring program is only as good as its sensors' accuracy. Everything from alarming and protecting to logging and reporting depends on proper data from precise, properly calibrated sensors. Any enterprise that monitors critical asset or process temperatures should have a recalibration strategy in place to minimize risk, loss, disruption and non-compliance.

Infinity SNAP Calibration program ensures your temperature sensors are accurate, properly calibrated, and meet regulatory compliance. With SNAP Calibration enrollment, Infinity provides new sensors with SANAS traceable calibration certificates prior to your current expiration date. Calibration compliance is completed by removing the old sensor and snapping the new sensor into place.

Advantages of Infinity "SNAP" calibration

- Removes administrative burden, uncertainty, and worry about required, recurring sensor calibration.
- Completely eliminates downtime associated with conventional recalibration.
- SNAP Calibration is far less expensive than traditional recalibration services.
- Plug-and-play makes Infinity SNAP Cal the most efficient recalibration system on the market.
- View, download, or print calibration certificates online in PDF from any web browser.
- Infinity adheres to strict quality controls and maintains ISO 17025 compliance.

How it works, Easy as 1...2...3...

- Enroll in Infinity's SNAP Calibration program by emailing support@infinity-iot.co.za
- Receive notification from Infinity prior to current certificate expiration that replacement sensors are on the way.
- Once your new calibrated sensors arrive, un-snap the old probes, "SNAP" in the new. Recalibration is now complete
